

## **ABSTRACT**

### **ACTION C3**

The aim of the action is to mitigate road accidents by installing low-cost deterrent systems based on alerting both drivers (warning signs) and wildlife warning devices (wildlife reflectors, acoustic repellents). Low cost deterrents cannot in any case replace a bearproof fence where, in combination with appropriate passages for wildlife (up and down fauna crossings), they can effectively reduce accidents. In any case, the benefit from applying low cost deterrent measures should not be seen as a solution to the accident but only as an attempt to mitigate them.
